DNA encoding MTR1 protein, useful e.g. for treating Beckwith-Wiedemann syndrome and tumors, also related proteins and antibodies.

N-PSDB; AAH20574

Claim 10; Fig 4; 46pp; German.

This invention describes a novel DNA sequence (I) encoding the MTRI protein that: (i) has at least one biological activity of a TRP (transient receptor potential) family protein; (ii) is connected with etiology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected with tumors involving 11p15.5 abnormalities. The products of the invention have anticancer and developmental activity. MRTI is involved in regulation of intracellular calcium ion levels, which are essential for cellular responses to hormones and/or growth factors; also in apoptosis

a

```
and cell growth, death and differentiation, and in urogenital diseases, including polycystic kidney disease. (I) and related ribozymes, antisense RNA, proteins and antibodies (Ab)) are used to treat or prevent diseases associated with altered expression of the MRTI gene or activity of its protein, or with calcium influx into cells, e.g. BNS, Wilms tumor, and thabdomyosarcome. Probes from (I), or Ab, are also used for disgnosis of such diseases. (I) can also be used for recombinant production of MRTI proteins (II) (used for analysis, characterization and thesases and related sequences, as primers for genetic fingerprinting, as source of oligonucleotides for biochips, and to raise anti-protein or anti-bya entibodies. (II) as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying the invention competition and MTRI protein described in the method of the invention
                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

                                                                                                         A new transient receptor potential channel, designated TRP8, is expressed in taste receptor cells and associated with perception of bitter and sweet taste, and is useful to find new flavor enhancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a mouse and human transient receptor potential channel, TRP8, expressed in taste receptor cells and associated with the perception of bitter and sweet taste. Modulators of TRP8 are useful as flavour enhancers in foods, beverages and pharmaceuticals

The invention relates to identifying (M1) a compound that modulates taste signalling in taste cells, by contacting the compound with a eukaryotic host cell or call membrane which expresses a taste cell-specific ion channel subunit (TC-ICS), and determining a functional effect of the compound upon a transmembrane ion flux of a predetermined ion, compound that modulates taste signalling in taste cells.

(M1) is useful for identifying a compound that modulates taste signalling in taste cells, for identifying a compound that binds to a taste cells.

(M2) is useful for identifying a compound that binds to a taste cells of in taste cells, for identifying a compound that binds to a taste cells.

(M2) is useful for identifying a compound that binds to a taste cell or specific ion channel subunit and for modulating taste signalling in taste cells of a mammal, in particular a human. Modulators identified by (M1) are used by the food and pharmaceutical industries to customize taste, cells of interest to the subject who ingests it. Bitter medicines can be made to taste less bitter and sweet substance can be enhanced. The modulators are tastem candidators and genetic modulation of taste signalling pathways. The taste modulators can be enhanced to mammalian subjects for modulation of taste in vivo. The present sequence is that of the predicted human ltrpc6 protein of the invention
                                                                                                                         1140
                                                                                                                                                                                                              1140
Identifying modulators of taste signaling in taste cells for use in food and pharmaceutical industries to customize and regulate taste, by determining effect of the compound on a taste cell-specific ion channel
                                                                                                                                                                          TAHRVDFIAKYLGGLREQEKRIKCLESQINYCSVLVSSVADVLAQGGGPRSSQHCGEGSQ

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRP) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antidiabetic, antidiabetic anticonvulsant, antiarthritic, osteoapathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fahy ED,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2003-845369/78.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO2003087768-A2
```

```
The present invention relates to a method (M1) for screening for candidate bioactive agents (A1) which are capable of: binding to transient receptor potential melastinin-like (TRRMS) polypeptide (ADR46686); modulating monovalent cationic permeability of channel comprising TRRMS polypeptide, and modulating expression of TRPMS nucleic acid. The method involves contacting TRMPS polypeptide, channel or cell expressing TRMPS nucleic acid with (A1) and detecting whether (A1) causes the required effect. TRPMS is a member of the differentiating Calciumactivated Nonselective (CAN) transmembrane channel polypeptide family and is activated by a rapid increase in intracellular calcium ion (Ca2+) levels. The TRPMS coding sequence (ADR48685) was derived from human kidney cells, however, TRPMS in a variety of tissues indicates a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 3; Fig 7; 69pp; English.

generalised role of the channel as a tool that couples agonist-induced relacasellular Ca2+ release to electrical activity and subsequent cellular responses. The TRPMS gene was found to be located on chromosome 11p15.5. The candidate bloactive agents identified by (MI), which can open TRPMS muscular systems of cell such as cells of nervous, immune, and conditions associated with diseases, or disorders, such as autoimmune or graft verses host diseases, or disorders, such as autoimmune or candidate bloactive agents identified by (MI), which can close TRPMS channels are useful for treating diseases, conditions associated with diseases, conditions associated with diseases, conditions associated with diseases, conditions associated with diseases, or disorders are useful for treating diseases.

                                                                             The invention relates to a method for identifying an agent that induces glucose-stimulated insulin production in an animal. The method comprises contacting an agent to a betaTRP polypeptide, and selecting an agent that binds to it or enhances its expression or activity. Further disclosed is a method for expressing betaTRP (beta-transducin protein) in a pancreatic islet cell. The method is useful for identifying an agent that induces glucose-stimulated insulin production in an animal, and thus treating individuals having Type 2 diabetes mellitus or having a predisposition for it. The current sequence represents the human betaTRP amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      298
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 418

transient receptor potential) family protein; (ii) is connected with etiology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected with twors involving 11p15.5 abnormalities. The products of the involving 11p15.5 abnormalities. The products of the crediblation of intracellular calcium ion levels, which are essential for regulation of intracellular calcium ion levels, which are essential for cellular responses to hormones and/or growth factors; also in apoptosis and cell growth, death and differentiation, and in urogenital diseases.

CC and cell growth, death and differentiation, and in urogenital diseases, including polycystic kidney disease. (I) and related ribozymes, antisense of sasociated with altered expression of the MRT1 gene or activity of its protein, or with calcium influx into cells, e.g. BWS, Wilms tumor. Thabdoid tumors and rabadomyosarcoma. Probes from (I), or Ab, are also cused for diagnosis of such diseases. (I) can also be used for recombinant of therrapy), as tissue or chromosomal markers, for identifying genetic diseases and related sequences, as primers for genetic fingerprinting, as source of oligonucleotides for biochips, and to raise anti-protein or competitive assays for (II) are used to raise anti-protein or competitive assays for (II) are used to raise Ab, as reagents in competitive assays for (II), as tissue markers; for identifying competition competition and in screening for (ant) agonists.                                               This invention describes a novel DNA sequence (I) encoding the MTR1

Creation that: (i) has at least one biological activity of a TRP

Creation that: (i) has at least one biological activity of a TRP

Creation that the creeptor potential) family protein; (ii) is connected with

criology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected

criology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected

criology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected

criology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected

criology of BWS (Beckwith-Wiedemann syndrome) and criolity. MRTI is involved in

criology of intracellular calcium includes growth factors; also in apoptosis

and cell growth, death and differentiation, and in urogenital diseases,

criology of WRI and disease. (I) and related ribozymes, antisense

CRNA, proteins and antibodies (Ab) are used to treat or prevent diseases

CRNA, proteins and antibodies (Ab) are used to treat or prevent diseases

CRNA, proteins and rhabdomyosarcoma. Probes from (I), or Ab, are also

cused for diagnosis of such diseases. (I) can also be used for recombinant

Cretherapy, as tissue or chromosomal markers, for identifying genetic

cherapy, as tissue or chromosomal markers, for genetic fingerprinting, as

Competitive assays for (II) as tissue markers; for identifying

competitive assays for (II) as tissue markers; for identifying

competitive assays for (II) as tissue markers; for identifying

by n channel pharmaceutical industries to customize and regulate taste, b ermining effect of the compound on a taste cell-specific ion Claim 1; Page 211; 306pp; English. determining subunit,

The invention relates to identifying (MI) a compound that modulates taste signalling in taste cells, by contacting the compound with a eukaryotic host cell or cell membrane which expresses a taste cell-specific ion channel subunit (TC-ICS), and determining a functional effect of the compound upon a transmembrane ion flux of a predetermined ion, compound that modulates taste signalling in taste cells.

(MI) is useful for identifying a compound that modulates taste signalling to in taste cells, for identifying a compound that binds to a taste cells.

(MI) is useful for identifying a compound that binds to a taste cells.

(C) in taste cells, for identifying a compound that binds to a taste cells.

(C) specific ion channel subunit and for modulating taste signalling in taste cells of a mammal, in particular a human. Modulators identified by (MI)

(C) specific ion channel subunit can industries to customize taste.

(C) are used by the food and pharmaceutical industries to customize taste.

(C) as as additives to food or medicine so that the food or medicine tastes different to the subject who ingests it. Bitter medicines can be made to customize taste.

(C) taste less bitter and sweet substance can be enhanced. The modulators are consecuted for mammalian consecuted mouse litrocs protein of the invention

                              The invention relates to a method for identifying an agent that induces glucose-stimulated insulin production in an animal. The method comprises contacting an agent to a betaTRP polypeptide, and selecting an agent that binds to it or enhances its expression or activity. Further disclosed is a method for expressing betaTRP (beta-transducin protein) in a pancreatic islet cell. The method is useful for identifying an agent that induces glucose-stimulated insulin production in an animal, and thus treating individuals having Type 2 diabetes mellitus or having a predisposition for it. The current sequence represents the mouse betaTRP amino acid

callular responses to hormones and/or growth factors, which are essential for callular responses to hormones and/or growth factors, also in apoptosis and cell growth, death and differentiation, and in urogenital diseases. Including polycystic kidney disease. (I) and related ribozymes, antisense associated with altered expression of the MRTI gene or activity of its protein, or with calcium influx into cells, e.g. BWS, Wilms tumor, thaddoid tumors and rhabdomyosaxcoma. Probes from (I), or Ab, are also cased for diagnosis of such diseases. (I) can also be used for recombinant therapy), as tissue or chromosomal maxres, for identifying genetic fingerprinting, as source of oligonucleotides for biochips, and to raise anti-protein or source of oligonucleotides for biochips, and to raise anti-protein or competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competities and in screening for (ant)agonists. This sequence in represents the murine MTRI gene described in the method of the invention Sequence 1158 AA;

The method comprises contacting an agent to a betaTRP polypeptide, and selecting an agent that binds to it or enhances its expression or activity. Further disclosed is a method for expressing betaTRP (beta-transducin protein) in a pancreatic islet cell. The method is useful for identifying an agent that induces glucose-stimulated insulin production in an animal, and thus treating individuals having Type 2 diabetes mellitus or having a predisposition for it. The current sequence represents the rat betaTRP amino acid

The invention relates to identifying (M1) a compound that modulates taste signalling in taste cells, by contacting the compound with a eukaryotic host cell or cell membrane which expresses a taste cell-specific ion channel subunit (TC-ICS), and determining a functional effect of the compound upon a transmembrane ion flux of a predetermined ion, identifying a compound that modulates taste signalling in taste cells, for identifying a compound that modulates taste signalling in taste cells, for identifying a compound that modulates taste signalling in taste cells, for identifying a compound that binds to a taste cells a specific ion channel subunit and for modulators identified by (M1) are used by the food and pharmaceutical industries to customize taste, cells of a mammal, in particular a human. Modulators identified by (M1) are used by the food and pharmaceutical industries to customize tastes.

C. C. S. as additives to food or medicine so that the food or medicine tastes cells therefor to the subject who ingests it. Bitter medicines can be made to taste less bitter and sweet substance can be enhanced. The modulators are useful for pharmacological and genetic modulation of taste signalling subjects for modulation of taste in vivo. The present sequence is that of the rat L-TRP protein of the invention

This invention describes a novel DNA sequence (I) encoding the MTRI

Cr protein that: (i) has at least one biological activity of a TRP

(transient receptor potential) family protein; (ii) is connected with

ctiology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected

with tumors involving lipi's abnormalities. The products of the

invention have anticancer and developmental activity. MRTI is involved in

cerlular responses to hormones and/or growth factors; also in apoptosis

collular responses to hormones and/or growth factors; also in apoptosis

and cell growth, death and differentiation, and in urogenital diseases,

cr including polycystic Kidney disease. (I) and related ribozymes, antisense

cr including polycystic Kidney disease. (I) and related ribozymes, antisense

cr nabodid tumors and antibodies (Ab) are used to treat or prevent diseases

cr associated with altered expression of the MRTI gene or activity of its

protein, or with calcium influx into cells, e.g. BWS, Wilms tumor,

cr habdoid tumors and rhabdomyosarcoma. Probes from (I), or Ab, are also

cused for diagnosis of such diseases. (I) can also be used for recombinant

cr production of MRTI proteins (II) (used for analysis, characterization and

cr interactiny), as tissue or chromosomal markers, for identifying genetic

chisases and related sequences, as primers for genetic fingerprinting,

cource of oligonucleotides for biochips, and to raise anti-protein or

cr anti-DNA antibodies. (II) as tissue markers; for identifying

competitive assays for (II), as tissue markers; for identifying

cr represents a human MTRI protein described in the method of the invention

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

S-09-949-016-11392
Sequence 11392, Application US/09949016
Patent No. 6812339.
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TILLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TILLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES 7
FILE REFERENCE: CLOO1307
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT PILING DATE: 2000-04-14
PRIOR RIPLING DATE: 2000-10-20

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 7,

#### **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images include but are not limited to the items checked:

BLACK BORDERS

IMAGE CUT OFF AT TOP, BOTTOM OR SIDES

FADED TEXT OR DRAWING

BLURRED OR ILLEGIBLE TEXT OR DRAWING

SKEWED/SLANTED IMAGES

COLOR OR BLACK AND WHITE PHOTOGRAPHS

GRAY SCALE DOCUMENTS

LINES OR MARKS ON ORIGINAL DOCUMENT

REFERENCE(S) OR EXHIBIT(S) SUBMITTED ARE POOR QUALITY

OTHER:

#### IMAGES ARE BEST AVAILABLE COPY.

As rescanning these documents will not correct the image problems checked, please do not report these problems to the IFW Image Problem Mailbox.
